

# Lychee fruit cream

## Description

This fruit cream has a similar creamy texture to products with higher fat contents. Several factors have come together to make this possible. First, the konjac thickens the mix and gives it the kind of silkiness that would characterize a higher-fat product. The agar-agar helps a gel to form and, because it is used in very small doses, it is not as firm as you might commonly expect. The coagulated egg whites help to balance out the textures and boost the product's creamy mouthfeel.

## Suggested uses

- Plated desserts
- Desserts, tarts and mini gateaux
- Tiny after-dinner format
- Dessert glasses

## Overall composition

Composition	1000 g	100%
Lychee purée	862 g	86.2%
Sugar	35 g	3.5%
Agar agar	1 g	0.1%
Konjac	2 g	0.2%
Egg whites	100 g	10%

## Technique

Mix the sugar, agar-agar and konjac, then sprinkle them onto the lychee fruit purée, mixing all the while, until homogenous.

Heat to 185°F (85°C), still stirring continuously, and combine with the egg whites. Mix again with a stand mixer. Heat to 180°F (82°C) as you would for a crème anglaise, then immediately pour out. Store at 40°F (4°C).

**Lychee fruit cream**

86.2% FRUIT PURÉE 3.5% ADDED SUGAR

**Ingredients**  
Lychee purée, Sugar, Agar agar, Konjac, Egg whites

NON-FREEZABLE

## Trick

It is possible to make a sugar tile that can be placed on the fruit cream. In this way, the crème brûlée world is found, with a silky cream and the crunchiness of caramel.

To do this, sprinkle a veil of dehydrated glucose onto a silicon mat using a fine sieve, then sprinkle with caster sugar (approximately 15 g of dehydrated glucose and 5 g of caster sugar for a surface of 30 x 40 cm).

Using a cookie cutter or a ruler, mark out shapes, then burn with a blowtorch.

### FRUIT PURÉE USED

Litchi Chinensis

### TASTING TEMPERATURE

Chilled
